

```
1  import { Pipe, PipeTransform } from '@angular/core';
2
3  @Pipe({name: 'capitalize'})
4
5  // pipe used to capitalize only the first letter of the first word
6  export class CapitalizePipe implements PipeTransform {
7
8      transform(value: any) {
9          if (value) {
10             return value.charAt(0).toUpperCase() + value.slice(1);
11          }
12          return value;
13      }
14
15  }
```
